

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) An electronic apparatus comprising:

a display controlling means ~~section for displaying~~ controlling the display of an image on a screen;

a housing means for housing a plurality of types of constitutive elements ~~utilized in generation of generated information~~ for generating a program for displaying an ~~[[of]]~~ image on said ~~display section~~ screen, and for housing selected display information for ~~selection of~~ selecting a constitutive element from said plurality of types of constitutive elements on said ~~display section~~ screen;

a selection means for selecting a first constitutive element for displaying screen layout options on said screen and a second constitutive element for displaying a source of information ~~from said plurality of types of constitutive elements~~, according to said selected display information displayed on said ~~display section~~ screen; and

a generation means for generating ~~said generated~~ information based on a result of the selecting ~~selection~~ by said selection means and for generating said program based on said ~~generated~~ information.

2. (Original) The apparatus according to claim 1, wherein said selection means selects and displays on said display section a plurality of selected display information

from said plurality of selected display information housed in said housing means, if there is a plurality of selected display information housed in said housing means.

3. (Canceled)

4. (Original) The apparatus according to claim 1, wherein said housing means houses a program generated by said generation means.

5. (Currently Amended) An electronic apparatus comprising:

a display controlling means ~~section for displaying~~ controlling the display of an image on a screen;

a housing means for housing a plurality of generation information for generating a program for displaying an ~~[[of]]~~ image on said ~~display section~~ screen, and for housing selected display information for ~~selection of~~ selecting a piece of generation information from said plurality of generation information on said ~~display section~~ screen;

a selection means for ~~selection of~~ selecting a first piece of generation information for displaying screen layout options on said screen and a second piece of generation information for displaying a source of information from said plurality of generation information, according to said selected display information displayed on said ~~display section~~ screen; and

a generation means for generating said program based on a result of said selecting ~~selection~~.

6. (Currently Amended) A program generation method comprising:

a housing step of housing a plurality of types of constitutive elements ~~utilized in generation of generated information~~ for generating a program for controlling the display of an image on a display-section screen, and of housing selected display information for ~~selection of selecting~~ a constitutive element from said plurality of types of constitutive elements on said ~~display-section~~ screen;

a selection step of selecting a first constitutive element for displaying screen layout options on said screen and a second constitutive element for displaying a source of information ~~from said plurality of types of constitutive elements~~, according to said selected display information displayed on said ~~display-section~~ screen; and

a generation step of generating ~~said generated~~ information based on a result of the selecting selection ~~by~~ said selection step and for generating said program based on said ~~generated~~ information.

7. (Original) The method according to claim 6, wherein said selection step selects and displays on said display section a plurality of selected display information from said plurality of selected display information housed in said housing step, if there is a plurality of selected display information housed through said housing step.

8. (Canceled)

9. (Currently Amended) A program generation method comprising:

a housing step of housing a plurality of generation information for generating a program for controlling the display of an image on a display-section screen, and of housing selected display information for ~~selection of~~ selecting a piece of generation information from said plurality of generation information on said ~~display-section screen~~;

a selection step of ~~selection of~~ selecting a first piece of generation information for displaying screen layout options on said screen and a second piece of generation information for displaying a source of information from said plurality of generation information, according to said selected display information displayed on said ~~display-section screen~~; and

a generation step of generating said program based on a result of said selecting ~~selection~~.
